

BETTER CiTies TODay

Working towards a low-carbon world is the simplest definition of the energy transition and an ambitious goal for us. We are committed to taking on the major challenges of the energy revolution, towards a more decarbonized, decentralized and digitalized world.

ENGIE is putting its innovation expertise and large range of capabilities to work on better city and sustainable mobility projects as part of supporting local authorities in their quest for sustainable urban development and a new vision for the living environment of communities. Thus, ENGIE is proud of being the principal partner of Energy Observer, the world's first boat to be powered only by hydrogen and renewable energies, that will be addressed at the Transition Monaco Forum.

We are making this revolution not in speech but in reality by integrating ourselves in local ecosystems and by working with community stakeholders to make cities safer, more efficient, more sustainable and more vibrant.

Find out how ENGIE is helping authorities around the world - at the Monaco Transition Forum - and thus contribute to create an environment with less congestion, greater energy efficiency and better quality of life for local people. **Olivier Biancarelli**, General Director Tractebel will share ENGIE's vision and concrete actions to build Better Cities Today during the panel debate scheduled **on June 27th at 2.30 pm** "Defining the 21st Century Metropolis". **Michael Schack**, head of Decentralized Solutions for Cities and Territories will animate the Energy workshop on June **27th at 11:50 am**.

We look forward to discussing these exciting topics with you and **are proud to be part of the Transition Monaco Forum initiative.**
